Wikipedia Search Application | Cheat Sheet

1. HTML Input Element

1.1 Search

The HTML

input   element with the type search is designed for the user to enter the search queries.

HTML

```
1    <input type="search" />
```

2. Bootstrap Components

2.1 Spinner

The Spinners can be used to show the loading state of the page.

HTML

```
1    <div class="spinner-border" role="status">
2      <span class="sr-only">Loading...</span>
3    </div>
```

3. Wikipedia Search Application

HTML   CSS   JAVASCRIPT   Inspect

```
1    <!DOCTYPE html>
2    <html>
3      <head>
4        <link rel="stylesheet" href="https://stackpa
5        <script src="https://code.jquery.com/jquery-
6        <script src="https://cdn.jsdelivr.net/npm/pc
7        <script src="https://stackpath.bootstrapcdn.
8      </head>
9      <body>
10       <div class="main-container">
11         <div class="wiki-search-header text-center
12           <img class="wiki-logo" src="https://d1tg
13           <br />
14           <input placeholder="Type a keyword and p
15         </div>
```

```
16        <div class="d-none" id="spinner">
17          <div class="d-flex justify-content-cente
```
